COURSEWORK

Advanced Topics in Cryptographic Algorithms & Blockchain Technology | Vulnerability Assessment & Penetration Testing | Information Security | Probability Models & Data Analysis | Algorithms & Data Structures | Functional & Logic Programming | Computer Systems | Cloud Computing | Web Information Systems | Human-Computer Interaction |

PROJECTS

GiX - Exchange (2022)	A decentralised exchange built with Ethereum Smart Contracts, React and Redux library. Facilitates ERC-20 token trading with open order books and traditional price charts.
MetaGram (2022)	A decentralised, immutable and censorship resistant social media platform inspired by Instagram, built with Ethereum Smart Contracts. Built using Solidity with Truffle and ReactJS with Bootstrap. Uses IPFS Infura API to generate hashes of media content which is stored on the Ethereum blockchain.
YG – Yield Aggregator (2022)	A yield aggregator that compares the APY between COMPOUND AND AAVE Protocol to find better interest rates. User makes DAI stablecoin deposits which is rebalanced by the protocol. Programmed in ReactJS and Solidity.
InvestIdea (2021)	A decentralised crowdfunding platform using Ethereum Smart Contracts. Build with Vue.Js and Solidity with Remix. Integrated with GAE.
Covid Shopper (2020)	A mobile app that help stores regulate social distancing behaviours and track crowdedness in stores using QR codes. Has a store recommendation feature based on the number of recorded local cases and available products in store. Built at the University of Queensland with React and TypeScript, backed by MySQL.
